

**MANUAL PRESSES**

**Functions**

The "MF" manual punching machines are exclusively intended for professional use and are specially designed and manufactured for processing polyamide profiles.

Online data sheet

**Technical Features**

The punching machine can be fixed to a workbench, but is ideally combined with the support base equipped with a reel (see figure).

The punching machine can carry out:

- Rod cutting and double Ø8 hole
- Ø8 hole for additional fastening mechanisms

Equipped with a millimeter rod to measure the length of the rods to be processed and a block that prevents them from slipping out after cutting.

As it is manual, it requires little maintenance other than lubricating the tools with cutting oil.

MF017 for machining GACS rod

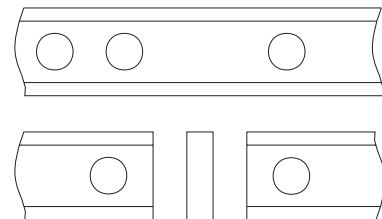

MF018 for machining R40 rod

Punching machine complete with support base and reel

Processing: Ø8 hole for additional fastening mechanisms; cutting and double Ø8 hole
